# Synchronet Startup Scripts (1.5)

Alternate startup scripts for the Synchronet BBS software - uses the "screen" command to manage session. This also restarts the BBS process if it crashes.

Official support sites: Official Github Repo - Official Forum

---

These start up the Synchronet BBS server at boot time with a "screen" process.

i. Copy **synchronetbbs** into **/etc/init.d** - make sure it is executable
ii. Copy **startsynchronetbbs** into **/sbbs** - make sure it is executable
iii. Run "**systemctl enable synchronetbbs**" (only needed once, will stick)
iv. Run "**systemctl start synchronetbbs**" - starts sbbs without restarting the server

When you want to view the SBBS console, just enter "**screen -r**" in your shell.

To disconnect from the SBBS console just press **CTRL-A CTRL-D**. This will leave it running and you can reconnect to it again.

I have only tested this on a Ubuntu 16.04 server…

If you want to turn off the server respawning type "**touch /sbbs/nostart**". To reenable it type "**rm /sbbs/nostart**".

Note: If you don't already have the "screen" tool installed you will need to install it by "**sudo apt-get install screen**".
